Product information

The thermostat is an underfloor heating thermostat equipped with a 1.8 inch TFT colour screen and capacitive contact surfaces for easy and clear navigation.

The thermostat features a variety of energy saving programs with individually adjustable times and temperatures. The adaptive function means that the thermostat collects data from the start and uses it to calculate the switch-on time.

A PI controller keeps temperature fluctuations to a minimum, ensuring uniform heating.

The thermostat also has a ventilation function that turns the heating off for 15 minutes if the temperature drops by more than 3 °C per minute.

Note

The product data corresponds to the EU regulations of the directive on the environmentally sound design of energy related products (ErP).

Operating and display elements

There is a series of contact surfaces on the front of the thermostat. These areas are illuminated and are outside the screen.
