

Mobile air purification

Viessmann air purifiers for healthy indoor air:  
**VITOPURE**

**Mobile air purification**

The new Viessmann Vitopure air purifiers meet the growing need for healthy air indoors.

Viessmann Vitopure air purifiers are ideal for meeting the growing need for healthy air indoors.

Using the Viessmann Vitopure air purifier in the bedroom

The new Viessmann Vitopure air purifiers meet the growing need for healthy air indoors. Three units are available with purification capacities of 250, 350 and 450 m<sup>3</sup>/h respectively. The air purifiers are connected via a plug-in power supply unit and are immediately ready for use.

#### **Effective against pollen, dust, viruses and bacteria**

The HEPA/activated carbon filters remove over 99.95 % of all particles from the air. The spread of fine dust, house dust, pollen, bacteria and viruses is almost completely stopped.

#### **Stay healthy and sleep better**

Clean air not only has a positive effect on health, it also improves the quality of sleep. The activated carbon filter absorbs volatile organic compounds (VOC) and removes unpleasant odours. On the control panel of the Vitopure air purifier, a coloured LED ring shows the current air quality and indicates when a filter change is required.

#### **Convenient control with Viessmann One Base**

Vitopure can be controlled via Viessmann One Base (which only requires the ViCare app for its operation) either manually, by setting fixed fan speeds, or automatically, in which case the unit analyses the air quality in the room and modulates the

ventilation output accordingly. In addition, users can create their own time profiles. Vitopure can be operated at minimum or maximum level for a defined period of time. For example, in the evening when going to bed or for quick air purification before returning home.

#### **Two colours to match the living environment**

Vitopure is available in the colours linen white and lava black to match the living environment.
